

Product protocol

Kenocox™

STEP 1

Take out all removable equipment

- Take all the removable equipment (buckets etc...) out of the barn, clean and disinfect all the material according to the protocol described below.
- Advantages: no recontamination when cleaning the room itself.

STEP 2

Dry cleaning

- Remove all manure, litter and feed residues
- Advantages: easier cleaning afterwards, reducing the time and increasing the efficiency of the wet cleaning (main cleaning)

STEP 3

Apply detergent

- Foam with 1,5 % **Keno™^{san}**
- All surfaces: walls, floor, ceiling, feed and water systems...
- Contact time: 30 minutes

STEP 4

Main cleaning

- Clean with high pressure: mechanical cleaning (50-150 bar and 12-30 liter/minute)
- All surfaces: walls, floor, ceiling, feed and water systems...
› Hot water if available (40°C): faster and easier cleaning

CID LINES®

Product protocol

Kenocox™

STEP 5

Rinsing

- Rinse the huts/pens/boxes with cold water (high pressure and high water flow) to remove the dirt particles and the chemicals

STEP 6

Remove excess of water and let dry

- Remove all the excess water from the huts/pens/boxes and let it dry
- It is important to start the disinfection in a dry stable to avoid dilution of the product

STEP 7

Anti-parasitic disinfection

- Spray or foam with **Kenocox™**, % based on diagnostics*.
- Contact time: minimum 2 hours
- Let it dry
- Rinse buckets before using them again
