

## THE SECOND SKIN EFFECT BARRIER TEAT DIP

### Product Description

Keno™din Film is a disinfecting barrier teat dip based on 3000 ppm of iodine. It has excellent disinfecting and skin conditioning properties. It assures a long lasting protection of the teats thanks to a film persistent between 2 milkings.

### Properties

Keno™din Film:

- Allows a perfect teat protection thanks to the high and stable active iodine concentration.
- Is highly efficient against both contagious and environmental mastitis organisms, such as *Staphylococcus aureus*, *Streptococcus spp*, *Escherichia coli*, etc...
- Is gentle for the skin of the teats thanks to a high level of emollients.
- Allows a long lasting protection thanks to a persistent film, creating a physical barrier on the teats and sealing the teat end.
- is easy to remove before the next milking.

Active substances notified according to regulation (EU) 528/2012: 0,3% w/w iodine (CAS no.: 7553-56-2).

Ready to use.

Use in TP3 (biocide for veterinary field).

### Direction of use

Immediately after milking, apply Keno™din Film on the teats with a dipcup.

### Specifications

Physical state	Viscous liquid.
Colour	dark brown.
pH	ca. 4.5 (100%)
Density	≈ 1.042 kg/l
Solubility in water	100 %

### Storage and Disposal

Keep only in the original container in a cool, well-ventilated place. Keep container closed when not in use. Protect from low temperatures. Keep at temperature not exceeding 30°C.

Keep the packaging closed for storage.

Keep and store the product in its original drum at temperatures between 5 and 25°C.

### Safety instructions for the user

Keep out of reach of children.

Care should be taken to reduce the possibility of eye contact.

In case of eye contact, flush the eyes with copious amount of water and seek medical advice.

For professional use.

Please check the MSDS.

Use biocides safely. Before use, read the label and the information concerning the product.
